ReactJS - TypeScript - JavaScript - JQuery - NodeJS - Postgres - Rest APIs - NPM - dJango - HTML - BackboneJS - Bootstrap - CSS - Less - JSON - Serverless - Postman - GitHub - Storybook - Grunt - Gherkin - Mocha - ServiceNow

Work Experience

SpeedCast, Houston, TX - Remote

Role: Solutions Engineer (November 2023 - Present)

- Developed REST and SOAP API integrations in ServiceNow to streamline data exchange between internal systems and third-party platforms.
- Maintained an eCommerce platform using Backbone.js and React.js, creating an online avenue for better user and sales representative experience
- Integrated third-party logistics systems via Node.js, streamlining order fulfillment and reducing manual processing.
- Delivered automated workflows and dashboards to senior leadership, driving decision-making for the company's self-startup activation initiative.
- Managed source control, versioning, and code releases in GitHub, ensuring seamless collaboration and deployment to Developer, Quality Assurance, and Production environments.
- Built and optimized CI/CD pipelines in Azure, configuring environment variables, function applications, and web services to enhance deployment efficiency and system reliability.
- Presented impactful technical solutions and progress updates in high-visibility meetings with stakeholders.
- Led a cross-functional team in Speedcast's global e-commerce site initiative, developing front-end and back-end features to increase website adoption by sales representatives and customer engagement

Finsemble, Charlottesville, VA - Remote

Role: Solutions Engineer (February 2022 - June 2023)

- Delivered efficient modular solutions to core product new features, bug fixes, and enhancement requests utilizing ReactJS and using Typescript for type annotation for a client base producing \$3.5M in revenue
- Implemented end-to-end and unit testing with Gherkin, Storybook, Enzyme, Mocha, Chai and Sinon
- Enhanced the open source FDC3 Workbench application focusing on app channels and intent raising utilizing Typescript for type management
- Assisted engineer-to-engineer clients with technical inquiries via support email/zoom calls
- Coordinated with cross-functional teams to quickly bring high quality results to customers

Kibo Commerce, Dallas TX - Hybrid

Role: Software Engineer (June 2016 - February 2022)

- Led 4 development teams in the US and overseas working on client storefront projects
- Utilized NodeJS and Grunt to streamline customer and item data before it is exported for client side rendering in Dev, UAT and Production environments
- Built REST APIs for internal data manipulations and retrieval and used api integrations to gather third party data
- Organized and aligned clients business requirements to functionalities within the Kibo eCommerce Platform
- Engaged in onboarding process for new hires into the development team
- Serverlessly deployed routing solutions to AWS lambda functions
- Directed client and partner development trainings for Kibo's eCommerce Platform
- Implemented and released quality front-end code for eCommerce clients with Backbone(javascript), Less/SCSS(CSS), and Django(HTML)
- Created custom client 3rd party integration and order routing customization portals in ReactJS
- Communicate openly with leadership on team and project evaluations
- Applied programming version control using Git
- Coached new developers to project teams on company best practices and standards
